

TEKLYNX® WEDGEWARE™

SETTING THE STANDARD

DATA ACQUISITION AND DELIVERY SOFTWARE

INTRODUCING WEDGEWARE™

Data Acquisition and Delivery Software.

WEDGEWARE data acquisition and delivery software captures serial or TCP/IP data, formats it to meet your needs, then inputs that data into any Windows application just as if someone had typed that information on a computer keyboard.

WEDGEWARE harnesses the power of keyboard wedge devices while giving you the flexibility to route data from any serial or TCP/IP device, including bar code scanners, magnetic stripe readers, scales, laboratory instruments, etc. And for more advanced data delivery needs, **WEDGEWARE** gives you the ability to use Visual Basic scripting for complete programmatic control over your data processing, application flow and navigation.

WEDGEWARE gives you the flexibility to route data from any serial or TCP/IP device

WEDGEWARE Allows You To...

- Collect real-time data from up to eight serial port connections and an unlimited number of TCP/IP connections.
- Run **WEDGEWARE** in three different modes— Wedge Mode, Script Mode or Automation Mode.
- Change **WEDGEWARE** Pro configuration settings in "hands-free" mode using its user-definable Auto-Activation Codes.
- Use the "Virtual Device" option to easily simulate a data source device – very useful for testing purposes.
- Drive any ActiveX or OLE Automation compliant object from **WEDGEWARE** Pro using the Microsoft Visual Basic Scripting Edition engine (included with **WEDGEWARE**).
